

Product Requirements Document (PRD)

Project Type: Full-Stack Web Application

Project: Personal Expense Tracker

Purpose: To help users record, manage, and analyze their personal expenses.

1. Project Name

Personal Expense Tracker

2. Problem Statement

Many people find it difficult to keep track of their daily expenses. They may use paper notes, spreadsheets, or simply try to remember what they spent. This can make it difficult to understand where their money is going and how much they spend each month.

3. Proposed Solution

We will build a simple **Personal Expense Tracker web application** that allows users to record, manage, and analyze their daily expenses in one place.

Users will be able to add expenses, edit or delete them, organize them into categories, and view their total spending through a simple dashboard.

4. Target Users

The application is designed for:

- Students
- Employees
- Freelancers
- Small business owners
- Anyone who wants to track personal expenses

5. Main Features

User Authentication

Users can:

- Create an account
- Log in
- Log out
- Access their personal expense data securely

Expense Management

Users can:

- Add an expense
- Edit an expense
- Delete an expense
- View all expenses
- Search/filter expenses

Each expense will contain:

- Expense name
- Amount
- Category
- Date
- Optional description

Expense Categories

Example categories:

- Food
- Transport
- Shopping
- Bills
- Entertainment
- Education
- Other

Dashboard

The dashboard will display:

- Total expenses
- Current month's expenses
- Number of transactions
- Spending by category

- Recent expenses

6. MVP — Minimum Viable Product

The first version will include:

- User registration and login
- Add expenses
- Edit expenses
- Delete expenses
- View expenses
- Expense categories
- Expense dates
- Dashboard
- Total spending calculation
- Monthly spending
- Category-wise spending
- Database integration
- REST API
- Responsive design

7. Technology Stack

Component	Technology
Frontend	Next.js / React
Backend	Node.js
Database	PostgreSQL
Authentication	Supabase Auth
Hosting	Vercel + Render
Version Control	GitHub

8. Basic User Flow

Register → Login → Dashboard → Add Expense → View Expenses → Edit/Delete Expense → Check Spending Summary

9. Basic Database Structure

Users

- User ID
- Name
- Email
- Created Date

Expenses

- Expense ID
- User ID
- Expense Name
- Amount
- Category
- Date
- Description
- Created Date

10. Success Criteria

The project will be considered successful if:

- A user can create an account.
- A user can securely log in.
- A user can add an expense.
- A user can edit an expense.
- A user can delete an expense.
- A user can view their expenses.
- A user can categorize expenses.
- The dashboard correctly calculates total spending.
- Users can view monthly and category-wise spending.
- The application is deployed and accessible online.

11. Future Improvements

Possible future features include:

- Monthly budgets
- Income tracking
- Savings goals
- Export expenses to CSV

- Email notifications
- Dark mode
- Advanced charts
- Recurring expenses

These features are **not required for the MVP**.

12. Expected Outcome

At the end of the project, we will have a complete full-stack **Personal Expense Tracker** that allows users to securely manage their expenses and understand their spending through a simple dashboard.
